

Scalar List bulk-copy primitive: paired CPU observations

All 192 adjacent pairs; full workload

Small and fallback controls (zoom)

Dots: every retained pair. Bars: geometric means and pointwise 95% paired-resampling intervals.
 Append + opaque full-value checksum + release/drain; debt includes construction. Loaded host and paced soak.
 System empty mean ratio 0.9841; adverse rows retained. Pre-format isolated binaries; no application/latency claim.
